

Product Data Sheet

Jute Anti-Erosion Net JEG

Order No. 2856

Large-meshed net of 100% hessian, for the application as erosion protection on areas where humus has just been applied; e.g. on pitched roofs, banks, or slope areas.

Technical Data

Jute Anti-Erosion Net JEG

Heavy, large-meshed net of 100% hessian fibres.

Weight:	ca. 500 g/m ²
Mesh width:	ca. 30–40 mm
Width:	ca. 1.22 m
Length:	ca. 70.00 m

Due to environmental reasons, the jute net is not treated with fire-proofing additives, therefore it is to be protected from open fire and to be covered by substrate after installation.

Features

- protects reliably against erosion
- completely biodegradable because of 100% natural fibre
- high water absorption capacity
- large-mesh is conducive to water run off and plant growth
- can be used for embankments and hills etc. to support technical biological constructions

Application Example

"Pitched Green Roof"

Plant level
Jute Anti-Erosion Net JEG
System Substrate "Rockery Type Plants"
Floraset® FS 75
Protection Mat BSM 64
Roof construction with root resistant waterproofing

Specification Suggestion

Anti-Erosion Net of 100 % jute, mesh width ca. 30–40 mm, weight ca. 500 g/m², to be overlapped with 200 mm on the levelled substrate layer and to be covered by substrate.
